## Warmup 3/ (Radius of a circle with a diameter of 38) created by Mr. Lischwe

1) Come up with two goals specific to this class for this 9 weeks. Write them on your slip of paper AND your warmup page.
2) Find the area and circumference. Write each answer BOTH WAYS - as an exact answer and as a decimal rounded to the nearest tenth.

> Exact Area: $625 \pi f^{2} t^{2}$
> Rounded Area: $1963.5 f^{2}$

Exact Circumference: $\mathbf{5 0 \pi} \boldsymbol{f t}$
Rounded Circumference: 157.1 ft

## BACK TO PAGE 14: Circles

## Examples: Working backwards

- If the circumference of a circle is 10 inches, find the radius.

$$
\begin{aligned}
C & =2 \pi r \\
10 & =2 \pi r \quad \text { (divide both sides by } 2 \text { ) } \\
5 & =\pi r \quad \text { (divide both sides by } \pi \text { ) } \\
1.6 & \approx r
\end{aligned} \quad \text { ( }
$$

- If the area of a circle is $30 \mathrm{in}^{2}$, find the diameter.

$$
\begin{aligned}
& A=\pi r^{2} \\
& 30=\pi r^{2} \\
& 9.549 \approx r^{2} \quad \text { (divide both sides by } \pi \text { ) } \\
& 3.1 \approx r \quad \text { (square root!) } \\
& 6.2 \approx d
\end{aligned}
$$

## Examples: Working backwards

- If the area of a circle is $36 \pi$ inches, find the radius.

$$
\begin{array}{cl}
A=\pi r^{2} & \\
36 \pi=\pi r^{2} & \text { (divide both sides by } \pi \text { - } \\
36=r^{2} & \text { goes away on both sides!) } \\
6=r & \text { (square root!) }
\end{array}
$$

- DISCUSS WITH YOUR TABLE:
- If the circumference of a circle is $16 \pi$ square feet, what is the exact area in feet?
oPLAN: Circumference $\rightarrow$ Radius, then Radius $\rightarrow$ Area

$$
\begin{gathered}
C=2 \pi r \\
16 \pi=2 \pi r \\
16=2 r \\
8=r \\
A=\pi r^{2} \\
A=\pi \cdot 8^{2} \\
\hline A=64 \pi f t^{2} \\
\hline
\end{gathered}
$$

## Find the area:

$$
\begin{aligned}
& C=2 \pi r \\
& 25=2 \pi r \\
& \frac{25}{(2 \pi)}=r \\
& 3.97887 \approx r \\
& A=\pi r^{2} \\
& A=\pi \cdot(3.97887)^{2} \\
& A \approx 49.7 \mathrm{~cm}^{2}
\end{aligned}
$$
