

# Warmup 1 / $\left(\frac{7 \cdot 7 \cdot 7 \cdot 7 \cdot 2}{7 \cdot 7 \cdot 7}\right)$

1. Convert the following recursive geometric rule to an explicit rule:

$$a_n = -5 \cdot a_{n-1}$$

$$a_1 = 4$$

$$a_n = 4 \cdot (-5)^{n-1}$$

1. Find the slope between the following points:  $(-5, 2)$ , and  $(3, 9)$

$$\frac{9-2}{3-(-5)} = \boxed{\frac{7}{8}}$$

2. Simplify using exponent rules.

$$x^5 \cdot x^{10} \underline{x^{15}}$$

$$\frac{\cancel{2x^{24}}}{\cancel{4x^{24}}} \underline{\frac{1}{2}}$$

$$(x^2)^{12} \underline{x^{24}}$$

$$(2)^{-2} \underline{\frac{1}{4}}$$

3. Write the equation of a line in slope intercept form of a line that has a slope of  $\underset{m}{-2}$  and contains  $(\underset{x}{1}, \underset{y}{-6})$ .

$$\boxed{y = -2x - 4}$$

$$y = mx + b$$

$$-6 = -2(1) + b$$

$$-6 = -2 + b$$

$$-4 = b$$

# Check Homework

# Quiz Tomorrow

---

- Naming Figures
- Finding the measures of angles and segments
- Problems like the pink sheet
- Midpoint and Distance
- I will give you the distance formula

# Alternate Method: Distance Formula

- How do you get the length of the HORIZONTAL leg?  
**Subtract the x-coordinates!**
- How do you get the length of the VERTICAL leg?  
**Subtract the y-coordinates!**

$$a^2 + b^2 = c^2$$

When I'm finding the distance, which letter is that?

$$\sqrt{a^2 + b^2} = c$$

If “a” is the horizontal distance and “b” is the vertical distance:

$$\sqrt{(x - x)^2 + (y - y)^2} = c$$

## Distance Formula

If  $(x_1, y_1)$  and  $(x_2, y_2)$  are the points, then:

$$d = \sqrt{(x_2 - x_1)^2 + (y_2 - y_1)^2}$$

- **NOTE: If this formula confuses you, you don't have to use it (at least not this year). You can just draw the triangle and use  $a^2 + b^2 = c^2$ !**

- Find the distance between:  
**(2, 10) and (6, 3)**

$$d = \sqrt{(x_2 - x_1)^2 + (y_2 - y_1)^2}$$

$$d = \sqrt{(6 - 2)^2 + (3 - 10)^2}$$

$$d = \sqrt{4^2 + (-7)^2}$$

$$d = \sqrt{16 + 49}$$

$$d = \sqrt{65}$$

$$d \approx 8.1 \text{ units}$$

# To find the distance between 2 points...

- You can use the formula

**OR**

- Graph them, draw the triangle, and use the Pythagorean Theorem

- **When would each be more useful than the other?**

# Find the distance between the points

**$(-7, -4)$  and  $(-4, 6)$**

$$d = \sqrt{(-4 - (-7))^2 + (6 - (-4))^2}$$

$$d = \sqrt{(3)^2 + (10)^2}$$

$$d = \sqrt{9 + 100}$$

$$d = \sqrt{109}$$

$$3^2 + 10^2 = d^2$$

$$d \approx 10.4 \text{ units}$$

# Find the length of the line segment

On a town map, each unit of the coordinate plane represents 1 mile. Three branches of a bank are located at  $A(-3, 1)$ ,  $B(2, 3)$ , and  $C(4, -1)$ .

A bank employee drives from Branch A to Branch B and then drives halfway to Branch C before getting stuck in traffic. What is the minimum total distance the employee may have driven before getting stuck in traffic? Round to the nearest tenth of a mile.

# REVIEW

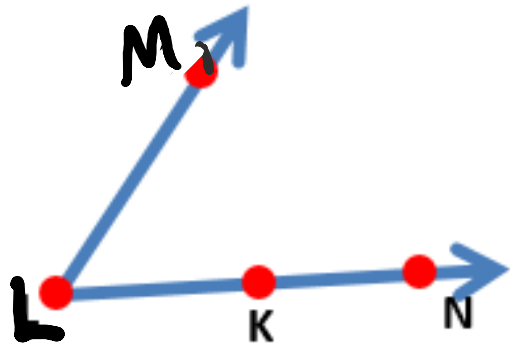

Whiteboards

How many of these are appropriate names for this line?

$\overleftrightarrow{J}$   $\overleftrightarrow{JK}$   $\overleftrightarrow{JL}$   $\overleftrightarrow{LK}$   $\overleftrightarrow{LJ}$   $\overleftrightarrow{JKL}$   $\overleftrightarrow{LKJ}$

How many of these are appropriate names for this angle?

$\angle LMN$

$\angle MLN$

$\angle NML$

$\angle NLM$

$\angle L$

$\angle LMN$

$\angle MLK$

$\angle KLM$

$\overrightarrow{BD}$  bisects  $\angle ABC$ ,  $m\angle ABD = (x+15)^\circ$ , and  $m\angle ABC = (12x)^\circ$ .

What is the value of  $x$ ?

$$(x+15) + (x+15) = 12x$$

$$2x + 30 = 12x$$

$$30 = 10x$$

$$\boxed{3 = x}$$

M is the midpoint of  $\overline{RS}$ . R has coordinates (6, -4), and M has coordinates (2, 1). What are the coordinates of S?

$$\frac{6+x}{2} = 2$$

$$\downarrow$$
$$6+x=4$$

$$\downarrow$$
$$x=-2$$

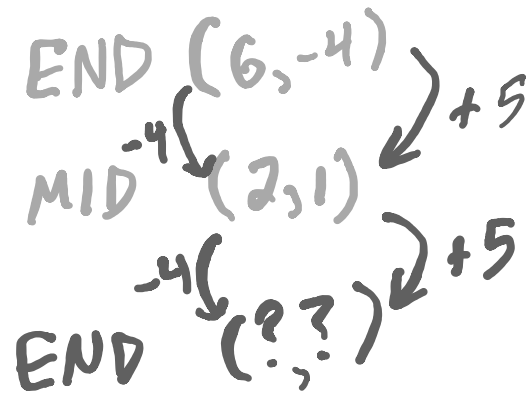

$$\frac{-4+y}{2} = 1$$

$$\downarrow$$
$$-4+y=2$$

$$\downarrow$$
$$y=6$$

$$\boxed{(-2, 6)}$$

OR

$$\boxed{(-2, 6)}$$

If  $m\angle ABC = \del{115}, find the  
<sup>180°</sup>  
value of  $x$ .$

$$85 + 2x = 180$$

$$2x = 95$$

$$\boxed{x = 47.5}$$

If  $m\angle ABC = 150^\circ$ , find the value of  $x$ .

$$37 + x + 37 = 150$$

$$74 + x = 150$$

$$\boxed{x = 76}$$

**How many points do you  
use if you are naming a  
plane?**

3

**If one of the endpoints is  $(-3, 7)$  and the midpoint is  $(2, 5.5)$ , what are the coordinates of the other endpoint?**

$(7, 4)$

Find the distance between  $(-4, 9)$  and  $(2, 1)$ .

$$6^2 + 8^2 = d^2$$

⋮

$$d = 10$$

**Find the distance between  $(-3, 5)$  and  $(6, 13)$ .**

$$9^2 + 8^2 = d^2$$

$$\sqrt{145} = d$$

$$12.0 \approx d$$

# Homework

- Study for quiz!
- Complete and check your worksheet using the answer key online (use a different color for corrections!)
