

# Warmup 10/ (The number of “Knuts” in a “Sickle” in the Harry Potter books)

- 1) Sketch step 25:
- 2) Complete the table:

Step number (n)	1	2	3	4	5	25
Number of squares (s)						

- 3) Write an equation:

# Going over the Quiz

---

<b>Simplifying &amp; Interpreting Expressions</b>	<b>p.1</b>
<b>Solving Equations</b>	<b>p.2</b>
<b>Fractions &amp; Story Problems</b>	<b>p.3</b>
<b>Equations with No Solution or Infinite Solutions</b>	<b>p.4</b>
<b>Inequalities</b>	<b>p.5</b>

<b>Point-Slope Form</b>	<b>p. 15</b>
<b>Solving Linear Inequalities</b>	<b>p. 16</b>
<b>Exponent Rules</b>	<b>p. 17</b>

# Discuss with your table

---

- ▶ How would you simplify these four to have ONE base and ONE exponent?

1.  $6^3 \cdot 6^{14}$

2.  $h^8 \cdot h^{10}$

3.  $\frac{2^5}{2^3}$

4.  $\frac{x^6}{x^3}$

---

# The Rules...

---

## Multiplying Powers with the same base

- ▶ Keep the base, add the exponents

## Dividing Powers with the same base

- ▶ Keep the base, subtract the exponents

**NOTE: THESE ARE JUST  
“SHORTCUTS”. THE FOOLPROOF  
METHOD IS TO EXPAND THEM OUT!!!**

---

Try it with numbers...

---

$$2^3 \cdot 2^2$$

$$\frac{2^6}{2^3}$$

# Examples: Multiplying

---

1.  $a^{45} \cdot a^{22}$

2.  $6^5 \cdot 6^3$

3.  $x^3 \cdot y^5 \cdot y^2 \cdot x$

4.  $12j^5 \cdot 3j^2$

5.  $(7a^5)(4a^3)$

---

# Examples: Multiplying

---

1.  $a^{45} \cdot a^{22}$

$$a^{67}$$

2.  $6^5 \cdot 6^3$

$$6^8$$

3.  $x^3 \cdot y^5 \cdot y^2 \cdot x$

$$x^4 \cdot y^7$$

4.  $12j^5 \cdot 3j^2$

$$12 \cdot j \cdot j \cdot j \cdot j \cdot j \cdot 3 \cdot j \cdot j \\ = 36j^7$$

5.  $(7a^5)(4a^3)$

$$28a^8$$

---

# Examples: Dividing

---

1.  $\frac{a^{45}}{a^{22}}$

2.  $\frac{6^5}{6^3}$

3.  $\frac{x^3 y^5}{xy^2}$

4.  $\frac{12j^5}{3j^2}$

5.  $\frac{5p^7}{25p^2}$

# Examples: Dividing

---

1.  $\frac{a^{45}}{a^{22}}$

$$a^{23}$$

2.  $\frac{6^5}{6^3}$

$$6^2$$

3.  $\frac{x^3 y^5}{xy^2}$

$$x^2 \cdot y^3$$

4.  $\frac{12j^5}{3j^2}$

$$4j^3$$

5.  $\frac{5p^7}{25p^2}$

$$\frac{p^5}{5}$$

# Bonus Problem
