Pythagorean Theorem Extra Practice Worksheet

For 1-3, is the triangle a right triangle? Show your work.

1)

$$6^2 + 8^2 \stackrel{?}{=} 9^2$$

$$100 \neq 81 \quad \boxed{\text{No}}$$

2)

$$5^2 + 12^2 \stackrel{?}{=} 13^2$$

$$169 = 169 \quad \boxed{\text{Yes}}$$

3) $a = 2.1, b = 7.2, c = 7.5$

$$2.1^2 + 7.2^2 \stackrel{?}{=} 7.5^2$$

$$56.25 = 56.25$$

$$\boxed{\text{Yes}}$$

For 4-8, find the length of the 3rd side of the triangle.

4)

$$4^2 + 8^2 = x^2$$

$$x \approx 8.9 \quad \boxed{x \approx 8.9}$$

5)

$$3.6^2 + x^2 = 7.4^2$$

$$x \approx 6.5 \quad \boxed{x \approx 6.5}$$

6)

$$3^2 + 7^2 = x^2$$

$$x \approx 7.6 \quad \boxed{x \approx 7.6}$$

7)

$$3.9^2 + x^2 = 11^2$$

$$x \approx 10.3 \quad \boxed{x \approx 10.3}$$

8)

$$x^2 + 2.7^2 = 6.5^2$$

$$x \approx 5.9 \quad \boxed{x \approx 5.9}$$

9) Find x:

$$10^2 + 7^2 = x^2$$

$$x \approx 12.2$$

$$5^2 + x^2 = 12.2^2$$

$$x \approx 11.1 \quad \boxed{x \approx 11.1}$$

Find the distance between the two points.

10)

6 (Not diagonal, can just count spaces)

11)

$$5^2 + 8^2 = x^2$$

$$x \approx 9.4 \quad \boxed{x \approx 9.4}$$

12)

$$5^2 + 9^2 = x^2$$

$$x \approx 10.3 \quad \boxed{x \approx 10.3}$$

Find the distance between the two points. Use the graph if you wish.

- 13) (1, 5) and (4, 9)

$$3^2 + 4^2 = x^2$$

$$d = 5$$

- 14) (-9, 2) and (-4, -3)

$$5^2 + 5^2 = x^2$$

$$d \approx 7.1$$

- 15) (-2, -7) and (6, -8)

$$1^2 + 8^2 = x^2$$

$$1 + 64 = x^2$$

$$65 = x^2$$

$$x \approx 8.1$$

- 16) (5, 9) and (11, 1)

$$8^2 + 6^2 = x^2$$

$$x = 10$$

- 17) (0, 0) and (300, 400)

$$300^2 + 400^2 = x^2$$

$$x = 500$$

- 18) (32, 80) and (37, 65)

$$5^2 + 15^2 = x^2$$

$$25 + 225 = x^2$$

$$250 = x^2$$

$$x \approx 15.8$$

- 19) A skyscraper is 100 feet tall. A man wants to use a 30-foot ladder to rescue somebody that is trapped in a room whose window is 28 feet above the ground. How far away from the building should he put the bottom of the ladder?

$$x^2 + 28^2 = 30^2$$

$$x \approx 10.8 \text{ feet}$$

- 20) The same ladder is moved out so that the base is 15 feet away from the building. How high will the ladder reach now?

$$15^2 + x^2 = 30^2$$

$$x \approx 26.0 \text{ feet}$$

- 21) Derman left his house and drove 14 miles east. However, he realized that he missed his turn, so he turned around and drove 2.5 miles west. He then drove 5 miles north. How far away from his house did he end up?

$$5^2 + 11.5^2 = x^2$$

$$x \approx 12.5 \text{ miles}$$
