

Name: _____

Practice: Finding Slope from a Graph

For each problem, find the slope of the line. Simplify if necessary.

For 7-10, draw a prediction of how steep you think a line would be with the given slope. Assume that it's not a problem like #5 and #6 where the y-axis is scaled differently.

7) Slope = $1/2$

8) Slope = 2

9) Slope = -1

10) Slope = -4
