

# Key Features Homework

1. Graph:  
 $f(x) = \frac{1}{2}x^2$

x	f(x)

2. Find  $g(3)$

3. Find  $x$  when  $g(x) = 3$

4. Draw a graph that is increasing then decreasing then increasing and has x intercepts of -2, 3, and 8.

5. Draw a graph that is decreasing at a constant slope (slope remains the same) and has a y intercept of 4.
