

Line Designs Intro Worksheet

Complete these exercises to get you ready to create your own line design!

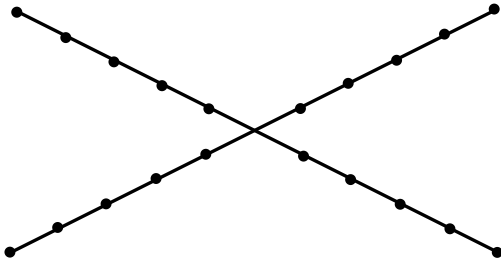

- 1) a. Use a ruler to connect the matching letters. Your design should look like the figure on the right!

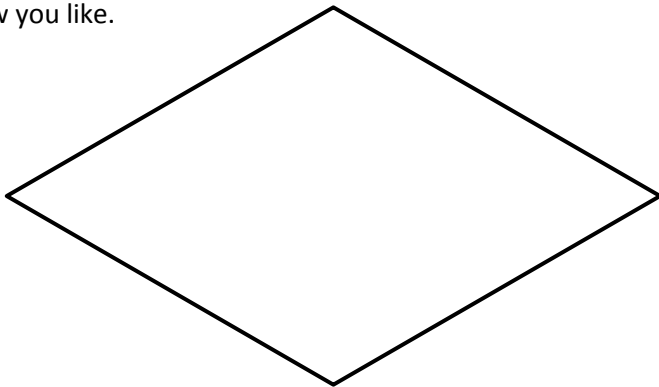

- 1) b. Now, try it without a ruler. (See how much worse it looks?)

- 2) Connect the dots so that there are curves in all four sections of the X.

- 3) In the rhombus, measure the dots out yourself, then connect them how you like.

- 4) In this angle, the sides are different lengths. Measure out the dots so that each side still has an equal number of dots, then connect them.

5) Every line design has a “straight line framework” – the lines you have to draw first that the dots go on. Which of these would be the “straight line framework” for this line design?
