

Linear Quiz 2 Review Homework

Name Key

Be able to know and interpret the three types of Linear Equations.

1) What is slope intercept form? How do you graph from slope intercept form?

$y = mx + b$ find the slope (m)
find the y-intercept (b)

2) What is standard form? How do you graph from standard form?

$Ax + By = C$ find the x + y intercepts

3) What is point slope form? How do you graph from point slope form?

$y - y_1 = m(x - x_1)$ use the point (x_1, y_1)
use the slope (m)

Be able to graph linear equations and inequalities.

4) $y = \frac{1}{3}x - 3$ slope: $\frac{1}{3}$
y-intercept: -3

6) $y - 2 = \frac{2}{3}(x - 5)$ slope: $\frac{2}{3}$
point: (5, 2)

8) $y > \frac{4}{3}x - 4$

5) $3x - 5y = 15$ x-int: 5
y-int: -3

7) $2y + 6 = -x$ solve for y
 $2y = -x - 6$
 $y = -\frac{1}{2}x - 3$

9) $x \leq -8$

Write the linear inequality for each.

10)

11)

Be able to solve for y to put each in slope intercept form.

12) $5x - 3y = 15$

$-3y = -5x + 15$

-3

$y = \frac{5}{3}x - 5$

13) $6y - x = 10$

$6y = x + 10$

6

$y = \frac{1}{6}x + \frac{10}{6}$

$y = \frac{1}{6}x + \frac{5}{3}$

14) $7y = -14x + 28$

$y = -2x + 4$

Be able to find x and y intercepts from an equation.

15) Jaime bought a jar of 50 vitamins. His two children each take one vitamin each day. The number of vitamins left in the jar after x days is represented by the function $y = 50 - 2x$.

a. Find the x intercept. What does it mean in terms of the situation?

$0 = 50 - 2x$ $-50 = -2x$ $25 = x \text{ int}$ After 25 days there will be no more vitamins

b. Find the y intercept. What does it mean in terms of the situation?

50 is the y-intercept. At the beginning there were 50 vitamins in the jar.

Be able to write an equation in point-slope form.

16) A roller skating rink offers a special rate for birthday parties. On the same day, a party for 10 skaters costs \$107 and a party for 15 skaters costs \$137.

a. Write an equation in point-slope form.

$(10, 107)$ $(15, 137)$ $\frac{137-107}{15-10} = \frac{30}{5} = 6$

$y - 107 = 6(x - 10)$ OR $y - 137 = 6(x - 15)$

b. How much would a party for 12 skaters cost?

$y - 107 = 6(12 - 10)$
 $y - 107 = 6(2)$
 $y - 107 = 12$ $y = 119$
 \$119

17) a. Write the equation in point-slope form for the line that passes through (4, 7) and (5, 1)

$\frac{7-1}{4-5} = \frac{6}{-1} = -6$

$y - 7 = -6(x - 4)$
 OR
 $y - 1 = -6(x - 5)$

b. Solve for y to put this equation in slope-intercept form

$y - 7 = -6(x - 4)$
 $y - 7 = -6x + 24$
 $y = -6x + 31$

$100 \overline{) 16000}$
 16000
 16000

Be able to graph a linear inequality and interpret solutions.

18) A local Apple store wants to sell more than \$16,000 worth of AirPods (x) and Apple Watches (y). AirPods cost \$160 and Apple watches cost \$800.

a. Write a linear inequality for this situation. $160x + 800y > 16,000$
 + Graph the solution.

b. Find a solution from the graph. What does it mean in the context of the situation?

$(100, 18)$
 If they sell 100 airpods + 18 watches they will make more than \$16,000.
