

## $\$ 100$

Find the slope both ways: by graphing them AND by using the formula. Show your work for both methods. (That means draw the points and the triangle!)

$$
(-1,8) \text { and }(2,7)
$$

## $\$ 100$

## Slope $=-1 / 3$

## $\$ 200$

Solve WITHOUT a graph: Line M goes through ( 3,6 ) and ( 4,2 ), and Line $\mathbf{N}$ goes through $(-1,3)$ and ( $1,-2$ ). Which line is steeper?

## $\$ 200$

## Slope of line M: -4

Slope of line $\mathrm{N}: ~-5 / 2$ or -2.5

## Line M is steeper

The slope between point $A$ and $(2,3)$ is 4 . Give three different possibilities for point $A$.

## $\$ 300$

## $(3,7) ;(4,11) ;(1,-1) ;(0,-5) ;(-1,-9)$

## $\$ 100$

## Graph the equation:

$$
y=-5 x
$$

## $\$ 100$

Scores
$\$ 200$
Write both equations:

## $\$ 200$

$$
\begin{gathered}
y=\frac{1}{2} x+4 \\
y=-\frac{1}{2} x+2
\end{gathered}
$$

## $\$ 300$

Find the equation of the line that goes through the points $(2,1)$ and ( $3,-1$ )

## $\$ 300$

$$
y=-2 x+5
$$

(Easiest method is to graph both points, then find the slope and the y-intercept)

## $\$ 100$

Patricia's parents kept track of her height from year to year. If you made a graph of this data, should you connect the points? Why or why not?

| Age in years(x) | Height in inches (y) |
| :---: | :---: |
| $\mathbf{5}$ | 38 |
| 6 | 40 |
| 7 | 42 |
| $\mathbf{8}$ | 44 |
| 9 | 46 |

## $\$ 100$

Yes; the numbers in between the values in the table make sense. She doesn't instantly go from 38 to 40 inches! In part of a year she grows part of the 2 inches.

The Brown family just got a new puppy. If $x$ is the age of the dog in years, then the weight (in pounds) of the dog $y$ can be modeled by the equation $y=2 x+5$. What is the slope, and what does it represent in terms of the situation? What is the yintercept, and what does it represent in terms of the situation?

## $\$ 200$

## Slope $=2 ;$ the dog is growing 2 pounds per year

Y-intercept = 5; the dog was originally 5 pounds

## $\$ 300$

Rick and Carl are going on a road trip. The graph shows the distance remaining after x hours.
a) Write an equation in slope-intercept form.
b) Say what the slope represents in terms of the situation.

## $\$ 300$

$$
\text { a) } y=-60 x+240
$$

# b) Each hour, their distance remaining goes down by 60. (In other words, they are driving 60 miles per hour) 

## $\$ 100$

## Is this a constant rate of change? Show your work.

| $x$ | $y$ |
| :---: | :---: |
| 0 | 4 |
| 2 | 22 |
| 4 | 40 |
| 8 | 76 |
| 9 | 85 |

## $\$ 100$

## Yes; the rate of change is 9 for each interval.

## $\$ 200$

Melinda is reading a book. At 2:05, she is on page 143. At 2:23, she is on page 152. If she keeps reading at this pace, what page will she be on at 2:37?

## $\$ 200$

## Page 159

## (She is reading $1 / 2$ a page every minute)

## $\$ 300$

Joey bought a plant. "x" represents is the number of weeks since Joey bought it and " $y$ " represents the plant's height in inches. Assume the plant grows at a constant rate. How fast is the plant growing, and how tall was the plant when he bought it?

| x | y |
| :---: | :---: |
| 2 | 8 |
| 5 | 12.5 |
| 8 | 17 |
| 11 | 21.5 |
| 14 | 26 |

## $\$ 300$

## 1.5 inches per week; originally 5 inches tall

## $\$ 100$

Phil has $\$ 200$ already and begins
a new job where he earns $\$ 12$ per hour. The amount of money Jill
has after working x hours is represented by the equation $\mathrm{y}=$ $15 x+100$. Who will have more money after working a 40 hour week?

## $\$ 100$

# Jill (she will have \$700; Phil will only have \$680) 

John and Paul each had a big math assignment to do. The number of problems John had left is
represented by the equation $y=-4 x+$ 50 , where x represents the number of minutes he has been working. The number of problems Paul has left is given in the table. Who was working faster?

| \# of <br> minutes | 0 | 2 | 5 | 7 | 11 |
| :--- | :--- | :--- | :--- | :--- | :--- |
| \# problems <br> left | 60 | 54 | 45 | 39 | 27 |

## $\$ 200$

John (4 problems per minutes; Paul only does 3 problems per minute)

## Tree A was 25 feet tall 5 years

 after it was planted. It was 29 feet tall 6 years after it was planted. Tree B was 32 feet tall 5 years after it was planted, and 38 feet tall 6 years after it was planted. Which tree was taller when it was planted, and how much taller was it?
## $\$ 300$

Tree A; 3 feet taller ( $\mathbf{5} \mathrm{ft}$. vs. 2 ft .)

## FINAL JEOPARDY

Put these in order from smallest slope to largest slope.

틀

Between ( $-5,15$ ) and ( $-7,2$ )

# FINAL JEOPARDY 

$$
\begin{gathered}
D(m=3) \\
E(m=3.5) \\
A(m=4) \\
B(m=5) \\
F(m=6.5) \\
C(m=8)
\end{gathered}
$$
