## Warmup $10 /\left(8 \div \frac{1}{2}\right)$

FOR EACH: Find the constant rate of change. Also, find the "original amount" if there is one.
1)

| Minutes | Sentences |
| :---: | :---: |
| $\mathbf{6}$ | $\mathbf{9 0}$ |
| 9 | 105 |
| 12 | 120 |
| 15 | 135 |

Rate of change
$=5$ sentences per minute
Original amount $=60$ sentences

| 2$)$ | Age | Weight (lbs) |
| :---: | :---: | :---: |
| 7 | 28 |  |
|  | 8 | 32 |
|  | 9 | 36 |
| 11 | 44 |  |

Rate of change
$=4$ pounds per year
Original height $=0$ in

| 3) | Age | Height (in) |
| :---: | :---: | :---: |
|  | 3 | 4.5 |
| 4 | 6 |  |
|  | 5 | 7.5 |
|  | 6 | 9 |

Rate of change
$=1.5$ inches per year
Original height $=0$ in

| Minutes | Sentences | Age | Weight (lbs) | Age | Height (in) |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 6 | 90 | 7 | 28 | 3 | 4.5 |
| 9 | 105 | 8 | 32 | 4 | 6 |
| 12 | 120 | 9 | 36 | 5 | 7.5 |
| 15 | 135 | 11 | 44 | 6 | 9 |
| $y=5 x+60$ |  | $y=4 x$ |  | $y=1.5 x$ |  |

## Back to your guided notes from yesterday!!!

## Proportional Relationships

- A proportional relationship is a special kind of linear relationship.
- It's proportional when it is linear AND the original value ( y intercept) is 0 !
- Proportional: $y=10 x$ (no b!!!)
- (Proportional relationships = JUST MULTIPLYING)

## Comparing:

- $y=m x+b$

If you plug in "0" for $x$, you will get " $b$ " as your $y$-value.
(I had \$100, and I earned \$12 more per hour)
$\cdot y=m x$
If you plug in " 0 " for x , you will get zero!!!
(I had no money, and I earned $\$ 12$ per hour)

## NOT <br> PROPORTIONAL!!!

- Proportional relationships are a SPECIAL TYPE of linear. It is impossible to be proportional but not linear.

## Find the constant rate of change. Also, find the "original amount" if there is one.

| Weeks | Books Read |
| :---: | :---: |
| 10 | 11 |
| 20 | 22 |
| 30 | 33 |
| 40 | 44 |

Rate of change $=1.1$ books per week
(Jim Kwik says this is about how many books CEOs read)

Original amount $=0$ books

$$
y=1.1 x
$$

Proportional!

## Find the constant rate of change. Also, find the "original amount" if there is one.

| Years | Weight (lbs) |
| :---: | :---: |
| 6 | 31 |
| 10 | 47 |
| 14 | 63 |
| 18 | 79 |

Rate of change $=4 \mathrm{lbs} /$ year
Original weight $=7 \mathrm{lbs}$

$$
y=4 x+7
$$

Linear but not proportional

## Find the constant rate of change. Also, find the "original amount" if there is one.

| Minutes | Meigs Moolah <br> signed | Rate of change $=12$ MM per minute |
| :---: | :---: | :--- |
| 2 | 24 | Original amount $=0$ |
| 5 | 60 |  |
| 7 | 84 | $\mathrm{y}=12 \mathrm{x}$ |
| 8 | 96 | Proportional! |

## Find the constant rate of change. Also, find

 the "original amount" if there is one.| Years | Height |
| :---: | :---: |
| 2 | $\mathbf{2}^{\prime} 10^{\prime \prime}$ |
| 4 | $3^{\prime} 4^{\prime \prime}$ |
| 7 | $3^{\prime} 10^{\prime \prime}$ |
| 11 | $4^{\prime} 6^{\prime \prime}$ |

Not a constant rate of change!!!
2 to 4: 3 inches per year
4 to 7: 2 inches per year
Not possible to write $\mathrm{a} y=\mathrm{mx}+\mathrm{b}$ equation.

## Find the constant rate of change. Also, find the "original amount" if there is one.

| Minutes | Problems left | Rate of change $=-3$ prolblems per minute |
| :---: | :---: | :---: |
| $\mathbf{3}$ | 74 | Original amount $=83$ |
| 5 | 68 |  |
| 7 | 62 | $y=-3 x+83$ OR $y=83-3 x$ |
| 8 | 59 |  |

## Find the constant rate of change. Also, find

 the "original amount" if there is one.| $x$ | $y$ | Rate of change $=3 / 2$ or 1.5 |
| :---: | :---: | :--- |
| 4 | 2 |  |
| $\mathbf{6}$ | $\mathbf{5}$ | Original amount $=-4$ |
| 8 | 8 |  |
| $\mathbf{1 0}$ | $\mathbf{1 1}$ | $\mathrm{y}=1.5 \mathrm{x}-4$ OR $\mathrm{y}=3 / 2 \mathrm{x}-4$ |

## HOMEWORK (Due tomorrow)

- Worksheet: Writing Equations from a Table
