## Assignment: Midterm Multiple Choice Analysis

Instructions: For each incorrect answer, identify the error that would lead to someone picking this correct answer. Use specific explanations. Writing "they mistakenly put a negative sign" is not specific enough. Writing "they thought that $\mathbf{1 4 - 1 8}$ was +4 instead of -4 " or "they divided by $\mathbf{2}$ when they should have divided by $\mathbf{- 2}$ " is specific enough. If your explanation requires you to put some work down to show what you mean, you should do that too.
