## Sage \& Scribe: Systems of Equations

The sage is the only one who may talk. The scribe is the only one who may write. Switch roles after each problem.

For 1 , solve by graphing.

1) $\begin{cases}y=-\frac{1}{3} x+5 \\ 2 x+y=10 & \text { Sage: } \\$\cline { 2 - 3 } \& Scribe:\end{cases}

## For 2, solve by substitution.

2) $\left\{\begin{array}{c}3 x+6 y=15 \\ x=8-y\end{array}\right.$
Sage: $\qquad$
Scribe: $\qquad$

For 3-4, solve by elimination.

5) Jack and Jill ran up the hill. Jack's time was 12 seconds faster than Jill's. If you add their times together, you get 1 minute and 38 seconds. Write and solve a system of equations to find each of their times.

Sage: $\qquad$
Scribe: $\qquad$
6) In a recent game, Steph Curry made 15 shots total. Some of his shots were 2-pointers and some of his shots were 3-pointers. (He made no free throws.) All together, he scored 34 points. Write and solve a system of equations to find how many of each type of basket he scored.
